Accessing the DNA Fusion Door Locking System via RemoteApp

DNA Fusion Door Locking System
The DNA Fusion application has been made available via our Remote Desktop Farm RemoteApp web page. Previously, users had to access the system through a virtual desktop at http://vdi.net.ucf.edu, but this new access method provides additional flexibility for users of Windows XP and Windows 7.

Windows XP

Signing into RemoteApp
Start by launching Internet Explorer and browsing to http://remoteapp.net.ucf.edu (note that Internet Explorer and Windows are required with this access method).

Enter your user credentials as NET\yourNID then enter your NID password and click ‘Sign in’.

Installing the ActiveX Control
If, upon signing in, you are met with this screen stating the ActiveX control is not installed, click on Tools > Manage Add-ons or double-click the blocked Add-on icon at the bottom of the Internet Explorer window.
Enabling the Add-ons

Under “Add-ons currently loaded in Internet Explorer”, the Microsoft Terminal Services add-ons will be displayed under “Disabled”. Click each add-on then select Enable.
Accessing the DNA Fusion Door Locking System via RemoteApp

After enabling the add-on, it will no longer display under ‘Disabled’. Once both add-ons are enabled, click OK.

You will be prompted to restart Internet Explorer. Simply close the browser and open it again.

Launching the Application

Once all the add-ons are installed and enabled, the DNA Fusion application can be launched. Simply click on the green ‘dnaFusion’ icon and wait for the prompt.

This page will look different depending on which applications you have access to, but the dnaFusion application icon should always be present.

A prompt will appear asking to connect to the application. Simply click ‘Connect’ to continue.

Enter the same credentials as before (NID and NID password) to launch the application.

Windows 7

Installing the Add-on
Start by launching Internet Explorer and browsing to http://remoteapp.net.ucf.edu (note that Internet Explorer and Windows are required with this access method).

You will receive a prompt at the top of your browser stating the website wants to run an add-on.
